

# THE DEFINITIVE ARDUINO LEONARDO PINOUT DIAGRAM

**i** 7-12V Depending on current drawn

**!** Absolute max per pin 40mA recommended 20mA

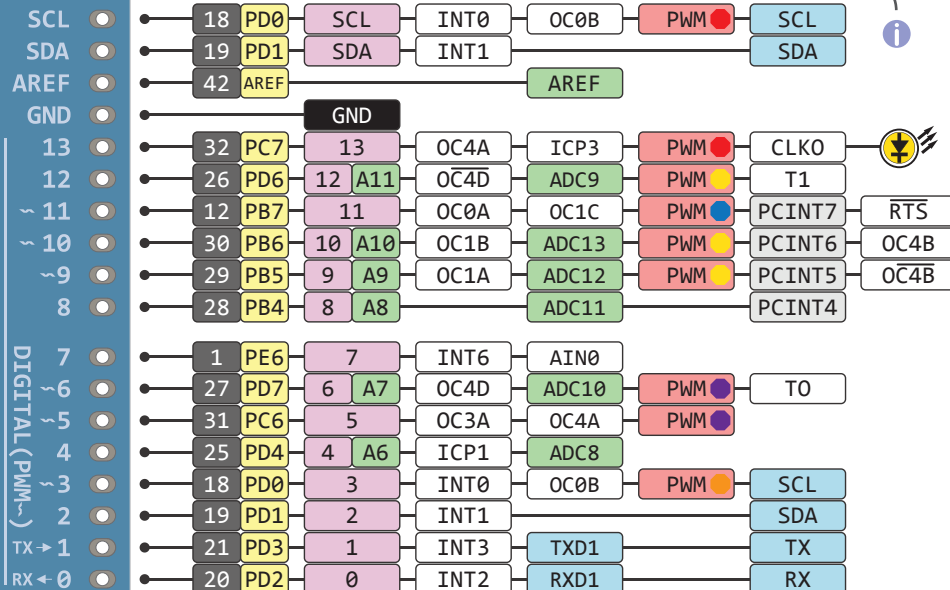

**STOP** Absolute max 200mA for entire package

This provides a Logic reference voltage for shields that use it. It is connected to the 5V bus.

Not Connected

The input voltage to the Arduino board when it is running from external power. Not USB bus power.

PWM type
